

give me idea to build screen for this module give me vvery basic screen which are come for this

Edit

Edit

Yes. And I actually think **separate screens are much better** than a collage. They are easier to review, present to your manager, and later convert into Figma.

However, I **can't generate 16 separate screens in one response** because of image generation limits.

### Here's the approach I recommend:

We'll create them in batches of **4 high-quality screens**.

#### Batch 1

1. **Courses Dashboard**
2. **Create Course – Basic Information**
3. **Course Landing Page**
4. **Curriculum Builder (Updated with your latest requirements)**

The **Curriculum Builder** will include all the changes you've requested:

- ☒ Course → Sections hierarchy
- ☒ **+ Add Section** button at the bottom
- ☒ Each Section has its own **+ Add Content** button
- ☒ Admin can choose content type:
  - YouTube Link
  - Udemy Link
  - PDF

- PPT
  - Article
  - Assignment
  - Quiz
  - External URL
  - Feedback (optional)
- ☒ Admin can skip any content type
- ☒ Drag-and-drop ordering
- ☒ Edit/Delete for sections and content
- ☒ Collapsible sections (expand/collapse)
- ☒ Modern enterprise LMS design (similar to Moodle + Coursera + Microsoft Learn)

Then we'll generate:

## Batch 2

5. Add Content Popup
6. Quiz Builder
7. Assignment Builder
8. Attendance (auto-generated from enrolled learners)

## Batch 3

9. Feedback Builder
10. Course Settings
11. Preview Course
12. Publish Course

## Batch 4

13. Enrollment Method
14. Manage Learners
15. Course Dashboard After Publish
16. Learner View (My Learning)

I also want to improve the **Curriculum Builder** beyond Moodle. Instead of a plain list, I'll design it as a **Notion-style block editor**, where each section is a card and the **+ Add Content** button opens a content picker. It's much cleaner, easier to use, and ideal for enterprise course authors.

That will give you a professional UI that you can take directly into Figma or present to your seniors.

Edit

Edit

for quiz it must be mcq,fill in the blanks so we need to give answer as well na and for assignment sometime admin may upload pdf or doc files of questions or scenario and learner must able to upload answer in the form of zip file,pdf docs,ppt

Exactly! This is how a real enterprise LMS works. The previous Quiz and Assignment screens were too basic. Based on your new requirements, I'd redesign them like this.

## 6. Quiz Builder (Enterprise Version)

Instead of just adding one question, the admin first creates the quiz.

 Requirement.pptx

-----

Submit Assignment

Upload

Drag files here

or

Browse Files

-----

Allowed

PDF

DOC

DOCX

PPT

ZIP

Maximum Size

50 MB

-----

Submit

This is exactly how most enterprise LMS platforms work.

## Another feature I recommend

Instead of allowing **only one file**, let both admins and learners upload multiple files.

### Admin uploads

Assignment

Scenario.pdf

Requirements.docx

SampleDatabase.sql

APICollection.json

EvaluationCriteria.pdf

### **Learner uploads**

Solution.zip

Presentation.pptx

Documentation.pdf

Database.sql

VideoDemo.mp4 (Optional)

## **My suggestion**

Your Assignment module should have **two separate sections**:

### **Admin Side**

- Assignment Details
- Instructions
- Upload Reference Files
- Submission Rules
- Allowed File Types
- Due Date
- Grading Rubric

### **Learner Side**

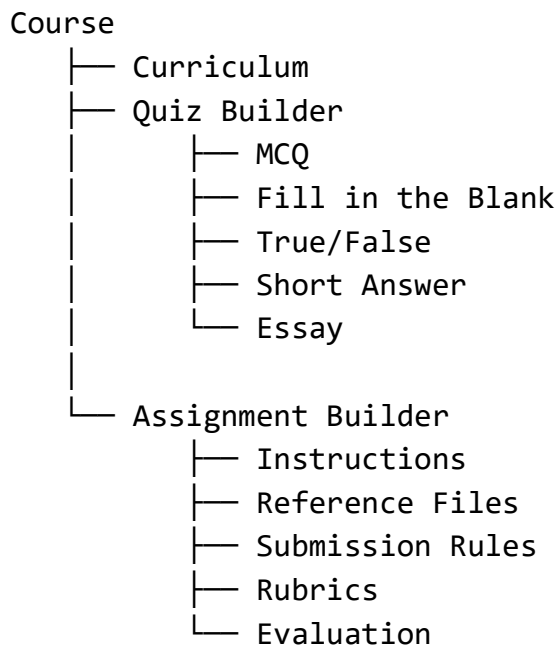

- View Instructions
- Download Reference Files
- Upload Solution

- View Submission Status
- Resubmit (if allowed)
- View Marks & Feedback

This separation makes the workflow much clearer.

## Final recommendation

Since you're designing this LMS from scratch, don't think of Quiz and Assignment as simple forms. Treat them as **mini-modules** within the Course module.

This architecture is scalable, matches enterprise LMS products, and will be much easier to extend later with features like plagiarism checking, peer review, or AI-assisted grading.

yes we have 5 roles na.....can you suggest me any AI tool help to system design based on this chat we are using....or i am giving you all prompt

Yes. And since we've been discussing your LMS for several days, I think you're at the stage where **AI can accelerate UI and system design**, but it won't replace the thinking. The AI will only be as good as the prompt you provide.

Your LMS is becoming quite large:

- **5 Roles** (Super Admin, Admin, Trainer, Learner, Guest)
- Learning Paths
- Courses

- Curriculum Builder
- Quiz Builder
- Assignment Builder
- Attendance
- Feedback
- Skill Cloud
- Skill Sense
- Reports
- Certificates
- Notifications
- Role-based dashboards

This is more like an enterprise product than a college project.

Since we've already discussed:

- Business flow
- Role hierarchy
- Learning paths
- Course lifecycle
- Curriculum
- Attendance
- Quiz
- Assignment
- Skill Cloud
- Skill Sense
-
